

ABSTRACT

Current technological developments are increasingly sophisticated so that speed and efficiency are urgently needed. At this time, Android-based smartphone mobile devices are not only used for SMS, telephone calls or browsing. Mobile smartphones can be used for other purposes such as ordering food menus at restaurants and other eating places. The use of a mobile smartphone for ordering food and administrative records can help a restaurant's business process. As designed at Setangkai Café. Mobile Smartphones can be used to replace paper and pens that have been used so far. The use of paper and pen for ordering food and drinks encountered obstacles such as multiple orders, unsuitable orders for food orders due to stacked notes especially when there were many visitors. The E-Menu application uses a computer or mobile at the kitchen and cashier side, and the Android mobile is used by waiters and customers to order food. Where when a customer places an order for food and drinks, it will be input on the Android Mobile and will be displayed at the cashier and the kitchen. So that the efficiency and speed of service can be used properly.
