

## ABSTRAK

Penelitian kuat tekan ini berupa beton polimer dengan komposisi terdiri dari resin epoxy dengan perbandingan 1:1 , 1:2 dan 1:3 , *slag*, dan agregat halus sebagai mortar, dan agregat kasar dengan gradasi 15mm - 30mm terhadap volume silinder. Tinjauan analisis penelitian ini adalah kuat tekan dengan benda uji silinder 15cm x 30cm. Benda uji **BSL9<sub>1</sub>** dengan campuran slag 9% perbandingan 1:1 resin dan hardener, **BSL9<sub>2</sub>** perbandingan 1:2, dan **BSL9<sub>3</sub>** perbandingan 1:3.

Hasil pengujian kuat tekan beton **BSL9<sub>1</sub>** memiliki kuat tekan yang tinggi 41,0 Mpa, **BSL9<sub>2</sub>** 31,1 Mpa dan **BSL9<sub>3</sub>** 11,9 Mpa. Penurunan Persentase nilai kuat tekan yang didapat **BSL9<sub>1</sub>** sebesar 9,9% terhadap **BSL9<sub>2</sub>** dan **BSL9<sub>2</sub>** sebesar 19,2% terhadap **BSL9<sub>3</sub>**.

## **ABSTRACT**

*This compressive strength research is in the form of polymer concrete with a composition consisting of epoxy resin with a ratio of 1:1 , 1:2 and 1:3 , slag, and fine aggregate as a mortar, and coarse aggregate with a gradation of 15mm - 30mm to the cylinder volume. Overview of the analysis of this study is the compressive strength with a cylindrical test object 15cm x 30cm. The test object was BSL9<sub>1</sub> with a mixture of 9% slag resin and hardener ratio 1:1, BSL9<sub>2</sub> ratio 1:2, and BSL9<sub>3</sub> ratio 1:3.*

*The results of the compressive strength test of BSL9<sub>1</sub> concrete have a high compressive strength of 41,1 Mpa, BSL9<sub>2</sub> 31,1 Mpa and BSL9<sub>3</sub> 11,9 Mpa. The decrease in the percentage of compressive strength obtained by BSL9<sub>1</sub> is 9,9% against BSL9<sub>2</sub> and BSL9<sub>2</sub> is 19,2% against BSL9<sub>3</sub>.*

*Keywords : Polymer, Epoxy Resin, Compressive Strength, Slag, Coarse Aggregate and Fine Aggregate.*
