

ABSTRAK

Penelitian ini bertujuan untuk merancang dan mengimplementasikan sistem input data STNK dan pelaporan tagihan piutang berbasis Microsoft Access pada Biro Jasa One Click Solution. Latar belakang penelitian adalah permasalahan pencatatan manual yang mengakibatkan risiko kesalahan data, keterlambatan pelayanan, dan hambatan dalam pembuatan laporan piutang. Metode penelitian yang digunakan adalah deskriptif kualitatif melalui observasi, wawancara, dan dokumentasi. Sistem dirancang dengan memanfaatkan fitur database relasional Microsoft Access untuk membangun tabel, form, query, dan report yang saling terintegrasi. Hasil implementasi menunjukkan bahwa sistem mampu mempercepat proses input data, meminimalkan kesalahan pencatatan, dan menghasilkan laporan tagihan piutang secara otomatis.

Kata kunci: Sistem informasi, Microsoft Access, laporan piutang, biro jasa

ABSTRACT

This study aims to design and implement an STNK data input and receivables billing report system using Microsoft Access at Biro Jasa One Click Solution. The research background is the problem of manual recording, which leads to data entry errors, service delays, and obstacles in generating receivables reports. The research method used is descriptive qualitative through observation, interviews, and documentation. The system was designed by utilizing the relational database features of Microsoft Access to build integrated tables, forms, queries, and reports. The implementation results show that the system can speed up the data input process, minimize recording errors, and automatically generate receivables billing reports.
